

Question 16. *For each coal-fired generating unit at the this facility, provide a list of all physical modifications or additions made to the fuel handling system or the electric stream [sic] generating unit of an amount greater than \$20,000 completed with the purpose of allowing the facility to use fuels other than bituminous coal. For each such project, identify the work performed, the date (month and year) the work was completed or projected to be completed, the project work order number, the dollar amount approved and/or expended, and the fuel type for which the modifications were made.*

We assume that the phrase “coal-fired generating unit” in Question No. 16 means “electric steam generating unit.”

There were no physical modifications or additions made to the fuel handling system or the electric steam generating unit of an amount greater than \$20,000 completed with the purpose of allowing the facility to use fuels other than bituminous coal.

This response was prepared by IPSC employee Jerry Hintze.
